

A man is shown from the waist down, wearing a light-colored cardigan over a yellow shirt and light-colored trousers. He is standing in a garden with a wooden fence in the background and a large grey planter with dark foliage in the foreground. The scene is bathed in warm, golden light.

EDITION 2018

>
SURFACE

TRUE VALUES ARE PRESENTED IN A MODERN PACKAGE.

Masterful craftsmanship, highest quality material and a keen sense of design, colours and finishes – that is what characterises the ESTERAS brand. Traditional values translated into an entirely new dimension characterised by modernity and authenticity.

WAHRE WERTE ZEITGEMÄß INSZENIERT.

Handwerkliche Meisterschaft, hochwertige Materialien und ein feines Gespür für Formen, Farben und Oberflächen – dies zeichnet die Marke ESTERAS aus. Traditionelle Werte umgesetzt in eine völlig neue Dimension, die durch ihre Modernität und Authentizität besticht.

LES VALEURS AUTHENTIQUES RÉINTERPRÉTÉES AU GOÛT DU JOUR.

Une grande maîtrise artisanale, des matériaux de haute qualité et un sens aigüe pour les formes, les coloris et les surfaces – voici ce que représente la nouvelle marque ESTERAS. Redécouvrez des valeurs traditionnelles interprétées dans une dimension nouvelle – moderne et authentique.

LA VERA QUALITÀ DAL TOCCO MODERNO.

Lavorazione artigianale, materiali di alta qualità ed uno stile impeccabile di forme, colori e superfici – ecco cosa rappresenta il marchio ESTERAS. Qualità tradizionale trasformata in una dimensione completamente nuova, all'insegna della modernità e dell'autenticità.

AND OUR LOVE FOR OUR
PRODUCTS. FOR PEOPLE
WHO APPRECIATE INDIVIDUAL
STYLE AND DESIGN.

SURFACE WITH CHARACTER
OBERFLÄCHEN MIT
EINZIGARTIGEM CHARAKTER
DES FINITIONS DE CARACTÈRE
SUPERFICI DI CARATTERE

PRODUCTS BY ESTERAS stand for design and highest authenticity. Reflecting nature – ESTERAS products impressively combine real surfaces with up to 70 % less weight. Simply convincing.

PRODUKTE VON ESTERAS stehen für Design und höchste Authentizität. Ganz nah an der Natur – so kombinieren sie beeindruckend echte Oberflächen mit bis zu 70 % geringerem Gewicht. Einfach überzeugend.

LES PRODUITS ESTERAS sont synonymes de design et de grande authenticité. Par leur aspect parfaitement naturel, les matériaux impressionnent par leur caractère authentique tout en offrant une plus grande légèreté pouvant aller jusqu'à 70 %. Un résultat bluffant.

I PRODOTTI ESTERAS rappresentano Design e la massima autenticità. Vicini alla natura – Per questo combiniamo superfici originali di impatto con un peso ridotto fino al 70 %. Semplicemente straordinario.

GOOD REASONS FOR CHOOSING ESTERAS GUTE GRÜNDE FÜR ESTERAS BONNES RAISONS D'OPTER POUR ESTERAS BUONI MOTIVI PER ESTERAS

EMSA STANDS FOR QUALITY MADE IN GERMANY We also place these high demands on the ESTERAS brand. We are the only brand manufacturer that monitors every single process step – at our own manufacturing facilities in Vietnam. This is where we combine our keen sense of design, trends and surface finishes with the very latest state of the art in manufacturing technology. For extraordinary and highly durable containers and fountains – for true and sustainable quality workmanship. This is not just a promise. We back it with our unique 10-year guarantee.

EMSA STEHT FÜR QUALITÄT MADE IN GERMANY Diesen hohen Anspruch stellen wir auch an die Marke ESTERAS. Als einzige Herstellermarke kontrollieren wir jeden einzelnen Prozessschritt – in unserer eigenen Fertigungsstätte in Vietnam. Dort kombinieren wir Gespür für Design, Trends und Oberflächen mit modernen Fertigungstechniken. Für außergewöhnliche Gefäße und Brunnen mit langer Lebensdauer – für echte und nachhaltige Wertarbeit. Darauf geben wir nicht nur unser Wort, sondern einzigartige 10 Jahre Garantie.

LE NOM EMSA EST SYNONYME DE LA QUALITÉ MADE IN GERMANY Cette exigence de qualité s'applique également à la marque ESTERAS. En tant que **marque de fabricant unique**, nous contrôlons chaque étape du procédé de fabrication dans notre unité de production au Vietnam où nous associons notre sens du design, des tendances et des matières à des techniques de fabrication ultramodernes. Pour une fabrication particulièrement soignée de pots, bacs et fontaines sortant de l'ordinaire et d'une longue durée de vie. Vous avez non seulement notre parole, mais surtout une garantie exceptionnelle de 10 ans.

EMSA È SINONIMO DI QUALITÀ MADE IN GERMANY Anche per il marchio ESTERAS seguiamo lo stesso principio. Come solo **marchio di produttori** controlliamo ogni singolo passaggio di processo nel nostro stabilimento di produzione in Vietnam. Qui coniughiamo il buon gusto in design, trend e superfici alle moderne tecniche di lavorazione. Per vasche e fontane che durano nel tempo – per un lavoro veramente accurato e sostenibile. Vi diamo non solo la nostra parola, ma anche una **garanzia esclusiva di 10 anni**.

*Si prega di attenersi alle avvertenze relative alla conservazione durante l'inverno ed alla manutenzione (P. 110)

fountainslite

WATER IN ITS MOST BEAUTIFUL FORM

The fountains from the fountainslite line skilfully make water centre stage and create oases of relaxation.

WASSER IN SEINER SCHÖNSTEN FORM

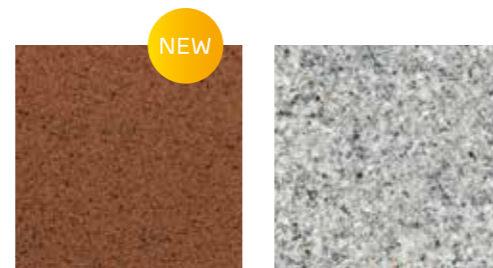

fountainslite-Brunnen setzen Wasser gekonnt in Szene und schaffen Oasen der Erholung.

L'EAU DANS SA PLUS BELLE DÉCLINAISON

Les fontaines fountainslite savent mettre en scène l'eau et créent des oasis de détente.

L'ACQUA NELLA SUA FORMA PIÙ ELEGANTE

Con le fontane fountainslite, l'acqua crea vere oasi di relax.

*Si prega di attenersi alle avvertenze relative alla conservazione durante l'inverno ed alla manutenzione (P. 110)

smartline

THE CHARACTER For living spaces with style. Full of contrast and harmony, they represent a new quality standard. A touch of luxury.

THE TECHNOLOGY Authentic mix of resin and stone with a smooth surface finish. Timeless elegance with perfect workmanship.

DER CHARAKTER Für Lebensräume mit Stil. Kontraststark und voller Harmonie repräsentieren sie einen neuen Qualitätsanspruch. Ein Hauch von Luxus.

DIE TECHNIK Authentischer Harz-Steinmix mit glattem Oberflächen-Finish. Zeitlose Eleganz in perfekter Verarbeitung.

LE CARACTÈRE Pour des espaces de vie stylés. Par la force de leurs contrastes et leur harmonie intrinsèque, ils représentent une nouvelle exigence de qualité. Une touche de luxe.

LA TECHNIQUE Mélange authentique de résine et de pierre avec surface lisse. Une élégance intemporelle et une finition parfaite.

IL CARATTERE Per ambienti ricchi di stile. Il forte contrasto e la completa armonia rappresentano un nuovo impegno verso la qualità. Un tocco di lusso.

LA TECNICA Un mix autentico di resina e pietra con finitura lucida. Una lavorazione perfetta per un'eleganza intramontabile.

natural authentic various

NATURAL STRUCTURE. The diversity of the naturelite collection is united with its absolutely authentic surfaces. Pure nature. • Die Vielfalt der naturelite Kollektion wird geeint durch absolut authentische Oberflächen. Pure Natürlichkeit. • L'authenticité absolue est le fil conducteur de la collection naturelite d'une très grande variété. La pureté du naturel. • La varietà della collezione naturelite impreziosita da superfici assolutamente autentiche. Naturalezza pura.

THE CHARACTER Materials that play with the visible traces of time to communicate their impressive personality.
THE TECHNOLOGY The combination of the intricately handcrafted surface finishing achieved through a series of complex steps and the addition of various mineral admixtures creates impressively natural surfaces – both in look and in feel.

DER CHARAKTER Materialitäten, die mit den sichtbaren Spuren der Zeit spielen, um so ihre beeindruckende Persönlichkeit zu zeigen. **DIE TECHNIK** Aufwändige Oberflächenveredelung in mehreren Handarbeitsschritten sowie eine Vielzahl mineralischer Beimengungen erzeugen beeindruckend natürliche Oberflächen – optisch und haptisch.

LE CARACTÈRE Des matériaux qui jouent avec les marques visibles du temps pour mieux mettre en valeur leur remarquable personnalité. **LA TECHNIQUE** Un traitement de surface raffiné exigeant plusieurs étapes de travail manuel ainsi que l'ajout de nombreux composés minéraux confèrent au produit un aspect naturel impressionnant, tant du point de visuel que tactile.

IL CARATTERE Materiali che giocano con le impronte visibili del tempo per mostrare la loro personalità sorprendente. **LA TECNICA** La raffinazione ottenuta durante i molti processi artigianali e l'aggiunta di minerali valorizzano straordinarie superfici naturali – visivamente ed emotivamente.

warm concrete

beton warm

BOLTON. WATFORD

BEAUTIFUL CONNECTION

Warm concrete-look creates a clear and appealing picture.

SCHÖNE VERBINDUNG

Warme Beton-Optik schafft einen klaren Look mit anziehendem Charakter.

UNE BELLE ALLIANCE

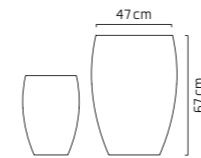

Le béton aux coloris chaleureux associe clarté des formes et caractère séduisant.

UNA COMBINAZIONE VINCENTE

Il beton con i colori più caldi assume un aspetto levigato, con un carattere ben definito.

naturalelements

NEW

CHARACTER Naturalelements planters capture different aspects of nature and create unique new surfaces. From ripple marks to refined wood grain patterns in a variety of colour combinations – these characterful designs really do create a special ambience.

TECHNIQUE Details from nature are meticulously incorporated into the tools. Combined with the meticulous surface finishing process used for naturelite products, which involves numerous stages of craftsmanship, the result is a number of unique visual effects.

DER CHARAKTER Naturalelements-Gefäße greifen Elemente aus der Natur auf und schaffen neue, einzigartige Oberflächen. Von den Rippelmarken bis zur edlen Holz-Maserung in verschiedenen Farbkombinationen – Charaktere für ein besonderes Ambiente.

DIE TECHNIK Details aus der Natur werden aufwändig in die Werkzeuge übertragen. Durch dies in Kombination mit einer wie bei naturelite aufwändigen Oberflächenveredlung in mehreren Arbeitsschritten entstehen einzigartige Optiken.

LE CARACTÈRE Les pots et bacs Naturalelements s'inspirent des éléments de la Nature pour créer de nouvelles finitions uniques. Aspect de rides concentriques ou de bois veiné précieux, combinaisons de couleurs : tous ces éléments caractéristiques participent à la création d'une ambiance particulière.

LA TECHNIQUE Dettagli ispirati alla natura sono riprodotti sapientemente in tutta la serie. La raffinata combinazione dei molti processi artigianali di qualità superiore previsti per la realizzazione dei prodotti naturelite valorizza superfici straordinarie.

IL CARATTERE I vasi Naturalelements si ispirano agli elementi della natura per creare superfici nuove e uniche. Dai ripple mark alle venature del legno vero in diverse combinazioni di colori, per donare carattere ad ambienti esclusivi.

LA TECNICA Les outils employés savent transmettre les détails inspirés de la Nature. Et comme dans le cas de la gamme naturelite, si l'on y ajoute un traitement de surface raffiné exigeant plusieurs étapes de travail, on obtient des produits uniques à l'aspect exceptionnel.

ripple marks

rippelmarken

DUST

Wind and water have the ability to create distinctive ripple marks – forming irregular yet harmonious patterns.

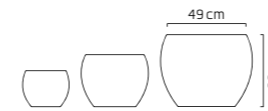

Wind und Wasser gelingt es unverwechselbare Rippelmarken zu schaffen – unregelmäßig und zugleich so harmonisch.

Le vent et l'eau parviennent à créer des vaguelettes à la surface de l'eau, formant des rides concentriques remarquables par leur irrégularité harmonieuse.

L'azione del vento e dell'acqua dà vita a ripple mark unici e inconfondibili: irregolari, ma nello stesso tempo armoniosi.

cliffs

CREAM WHITE SOFT GREY DARK CHOCOLATE

Drawn by nature over thousands of years. Reminiscent of rugged, rocky coastlines, this wonderful layered structure is the hallmark of the new 'Cliff' planters. This line is sure to be a stylish head-turner with its bold triangular forms and three natural shades.

In Jahrtausenden von der Natur gezeichnet. Diese wunderbare Schicht-Struktur erinnert an schroffe Felsküsten und kennzeichnet die neuen Cliff-Gefäße. Kombiniert mit der ausdrucksstarken Dreiecksform und drei natürlichen Farbrichtungen wird diese Serie zum stilvollen Blickfang.

Un façonnage par la Nature durant des milliers d'années. Cette merveilleuse structure en strates rappelle l'aspect des falaises escarpées et caractérise la gamme Cliff. Associée à une forme triangulaire très marquante et trois coloris empreints de naturalité, cette ligne de produits attire les regards par son style très personnel.

Modellate dalla natura nel corso dei millenni. Questa meravigliosa struttura stratificata, che ricorda le scogliere più ripide e scoscese, è il tratto distintivo dei nuovi vasi della serie Cliff. Combinata con la suggestiva forma triangolare e i tre colori naturali, questa serie è una vera gioia per gli occhi, ricca di stile ed eleganza.

wood rings

holzmaserung

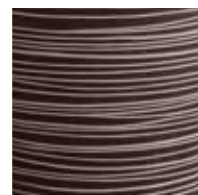

The contrasts in the grain of valuable wood provide the inspiration for these special planters – unique and extremely attractive. Soft grey, smoke black or dark chocolate for an authentic retro look.

Die kontraststarke Maserung von edlem Holz war die Inspiration für diese besonderen Pflanzgefäße – einzigartig und hoch attraktiv. Soft grey, smoke black oder in dark chocolate für einen authentischen Retro-Look.

Ces bacs à plantes ont puisé leur inspiration dans le contraste rappelant les veines d'un bois précieux, ce qui leur confère un caractère unique et extrêmement séduisant. Déclinaison dans les coloris soft grey, smoke black ou dark chocolate un look rétro authentique.

SOFT GREY

DARK CHOCOLATE

SMOKE BLACK

Le venature del legno autentico hanno ispirato queste fioriere a forma di trogolo davvero speciali, esclusive e irresistibili. Soft grey, smoke black o color dark chocolate, questi sono i colori disponibili per un autentico look retrò.

winter care + storage

PLANTERS

(Fibreglass-reinforced: **smartline**, **naturelite**, **naturalelements**.
Ceramic: **terraneo**)

Winterproof. Frost-proof. Frost-resistant. What does it all mean?

When it comes to planters, there's one thing you should know: when freezing water expands, it can even cause steel (e.g. heating and water pipes in house walls), asphalt and iron to burst. Materials and processing play a crucial role in the durability of planters, but the right handling and care are also essential.

Winter care

The best plan is to store both the plant and the pot in a dry, sheltered place. If the plant is hardy and is to be left outside, please note the following: Containers that remain outdoors during the winter months need a drainage hole. Please ensure that the container is drained properly, e.g. with EasyDrain by EMSA. As an alternative, cover the drainage hole with a drainage layer of expanded clay and fibre fleece. Otherwise snow and rainwater will remain in the container and turn into ice and expand when temperatures drop below zero. This may cause the container to shatter. We recommend placing containers under a covered location where you can determine the amount of water. If the containers are not equipped with integrated bases, support the containers with separate bases. Otherwise the container may become fastened to the level surface on which it is placed through the capillary force of the roots which may cause frost damage to parts touching the ground. During the winter months, trays have to be removed or turned over to prevent any ice from forming, which in turn may cause the container to shatter. Take care to prevent water from gathering in empty receptacles. It is best to store all empty containers indoors, turn them upside-down or cover them.

Product care

Always make sure your plants are well drained. This is easily done with EasyDrain by EMSA. The plant tubs may be cleaned with water and a soft brush, if required. Avoid using aggressive chemicals or mechanical cleaning agents, such as bleach, high-pressure cleaners or hard brushes, which might affect or damage the patina. Unless otherwise specified, all planters are provided with a drainage hole. When using the pots indoors, please remember to protect the floor or table-top from excess water with waterproof inserts or saucers. Standard felt mats will protect delicate surfaces against scratching

FOUNTAINS

(**fountainslite**)

Assembly

The fountain should be erected on a flat, level surface to ensure a constant flow of water. An appropriate base consisting of gravel, stone slabs or another firm material provides ideal stability. A fountain pump may only be connected to a 230-volt earthed power supply (A.C.). Suitable outdoor pumps are included in the standard equipment and can also be ordered as a separate part.

Maintenance

The water needs to be topped up regularly to maintain the correct level and ensure that the pump is properly submerged. The pump may become damaged if the water level is too low. How often a fountain has to be refilled depends on the water supply and the weather conditions while the fountain is in operation. Since the fountain has been conceived for outdoor use and neither the design nor the manufacturing process can completely rule out a certain amount of splashing, we recommend installing the fountain on a surface that is insensitive to water. The fountain may be cleaned with water and a soft brush, if required. Avoid using aggressive chemicals or mechanical cleaning agents, such as bleach, high-pressure cleaners or hard brushes, which might affect or damage the finish. To combat the build-up of algae, we recommend starting to use algacides straight away. These products can be purchased at garden centres or pond supply outlets.

Winter care

Bird-baths, fountain heads and other water-carrying parts should not be left outside during the winter, as they might crack when the water freezes. Any other parts that remain standing in a basin, such as the pedestal, may also be damaged by freezing water. For this reason, fountains should ideally be kept in a dry, sheltered place throughout the winter months.

Look up **www.esteras.com** for further tips and information.

überwinterung + pflege

PFLANZGEFÄßE

(GFK: **smartline**, **naturelite**, **naturalelements**. Keramik: **terraneo**)

Winterfest. Frostfest. Frostbeständig. Was heißt das?

Wenn es um Pflanzgefäße geht, sollten Sie wissen: Gefrierendes Wasser sprengt mit seiner Ausdehnung selbst Stahl (z.B. Heizungs- und Wasserrohre in Hauswänden), Asphalt und Felsen. Entscheidend für die Haltbarkeit ist neben Materialität und Verarbeitung die richtige Handhabung / Pflege.

Winterpflege

Idealerweise sollten Pflanze und Gefäß an einem wettergeschützten, trockenen Ort überwintern. Ist die Pflanze winterhart und soll auch im Winter draußen bleiben, gilt es Folgendes zu beachten: Töpfe, die im Winter draußen bleiben, müssen eine Ablauföffnung haben. Achten Sie auf eine funktionierende Drainage, z.B. mit EasyDrain von EMSA. Alternativ decken Sie den Ablauf mit einer Drainageschicht aus Blähton und einem Gärtnervlies ab. Sonst bleibt das Regen- oder Schneeswasser in den Töpfen stehen, wird bei Frost zu Eis und dehnt sich aus. Der Topf wird gesprengt. Grundsätzlich besser ist ein überdachter Standort, an dem Sie die Menge des Gießwassers bestimmen können. Falls die Gefäße nicht schon mit integrierten Füßchen ausgestattet sind, bocken Sie die Gefäße mit separaten Füßchen auf, damit überschüssiges Wasser auch abfließen kann. Sonst saugt sich auf ebenen Flächen das Gefäß durch die Kapillarkraft der Wurzeln förmlich fest, so dass ein Frostschaaden am Boden entstehen kann. Untersetzer müssen im Winter weggenommen oder umgedreht werden, damit sich keine Eisplatte bildet, die zum Absprengen des Gefäßbodens führen kann. Sorgen Sie dafür, dass sich auch in leeren Gefäßen kein Wasser ansammeln kann. Am besten alle leeren Gefäße innen lagern bzw. auf den Kopf stellen oder abdecken.

Pflege Tipps

Sorgen Sie immer für eine gute Drainage – am einfachsten geht dies mit EasyDrain von EMSA. Falls gewünscht, können die Pflanzgefäße mit Wasser und einer weichen Bürste gereinigt werden. Verwenden Sie keine aggressiven chemischen oder mechanischen Reinigungsmittel, d.h. keine Bleichmittel, Hochdruckreiniger oder harten Bürsten, weil dies die Oberfläche / Patina verändern oder zerstören kann. Alle Gefäße sind, sofern nicht anders gekennzeichnet, mit einem Wasserablauf versehen. Bitte beachten Sie bei der Verwendung im Innenbereich, den Untergrund durch wasserdichte Einsätze oder Untersetzer vor überschüssigem Gießwasser zu schützen. Handelsübliche Filzgleiter schützen empfindliche Oberflächen vor Kratzern.

BRUNNEN

(**fountainslite**)

Aufbau

Der Brunnen sollte auf einer flachen, ebenen Fläche aufgestellt werden, um einen gleichmäßigen Wasserfluss sicherzustellen. Eine Brunnenpumpe darf nur mit geerdetem 230-Volt-Netzteil (Wechselstrom) betrieben werden. Passende outdoorfähige Pumpen sind standardmäßig im Lieferumfang enthalten und können auch als Ersatzteil nachbestellt werden.

Pflege Tipps

Regelmäßiges Nachfüllen ist erforderlich, um das Wasserniveau auf dem richtigen Stand zu halten und sicherzustellen, dass die Pumpe vollständig untergetaucht bleibt. Wenn der Wasserstand zu niedrig ist, kann die Pumpe beschädigt werden. Wie oft ein Brunnen befüllt werden muss, hängt vom Wasserstrom und von den Wetterbedingungen während der Betriebszeit des Brunnens ab. Da die ESTERAS Brunnen für den Außenbereich konzipiert wurden und Spritzwasser form- und verarbeitungsbedingt nie ganz ausgeschlossen werden kann, empfehlen wir, die Brunnen nur auf einen wasserunempfindlichen Untergrund zu stellen! Falls gewünscht, kann der Brunnen mit Wasser, einer milden Seife und einer weichen Bürste gereinigt werden. Verwenden Sie keine aggressiven chemischen oder mechanischen Reinigungsmittel, d.h. keine Bleichmittel, Hochdruckreiniger oder harten Bürsten, weil dies die Oberfläche / Patina verändern oder zerstören kann. Wir empfehlen von Beginn an die Verwendung von Algenvernichter, verfügbar im Teich- oder Gartenhandel, um das Wachstum von Algen zu verhindern.

Winterpflege

Brunnenschalen, Oberteile und andere wasserführende Bauelemente sollten im Winter nicht draußen gelassen werden, da sie durch gefrierendes Wasser platzen können. Auch Teile, wie z.B. Sockel, die in einem Becken stehen, können durch gefrierendes Wasser beschädigt werden. Idealerweise sollten Brunnen daher an einem wettergeschützten, trockenen Ort überwintern.

Weitere Hinweise und Informationen finden Sie unter **www.esteras.com**

avvertenze per la conservazione durante l’inverno e la manutenzione

BACS À PLANTES

(Composite de fibres de verre : **smartline**, **naturelite**, **naturalelements**. Céramique : **terraneo**)

Résistant au froid. Non gélif.

Résistant au gel. Qu’est-ce que cela signifie ?

Concernant les pots et bacs à plantes, il faut savoir que l’eau, en gelant, se dilate et peut même faire éclater l’acier (par ex. des tuyaux d’eau chaude ou de chauffage dans les murs de bâtiment), l’asphalte et les roches. Outre le matériau et la finition, une manipulation et un entretien adaptés interviennent également dans la durabilité du .

Entretien pendant l’hiver

Idéalement, la plante devrait passer l’hiver dans son pot dans un endroit protégé et sec. Si plante résiste au froid et doit rester à l’extérieur pendant l’hiver, veuillez tenir compte des conseils suivants :

Les bacs et les pots qui restent à l’extérieur pendant l’hiver doivent posséder un orifice d’écoulement de l’eau. Assurez-vous que votre système de drainage est efficace (par exemple, avec EasyDrain d’EMSA). Si les pieds ne sont pas déjà intégrés aux pots, mettez les pots sur des pieds séparés. Sinon, l’eau de pluie ou la neige fondue stagneront dans les pots et se transformera en glace en cas de gel et dilatera le pot qui éclatera. Il est préférable de placer le pot dans un endroit couvert où vous pourrez estimer la quantité d’eau s’écoulant. Nous vous recommandons vivement de placer les pots sur nos « patins » afin que l’excédent d’eau puisse aussi s’écouler. En effet, sur une surface plane, le pot est « aspiré » par la force capillaire des racines, l’eau ne peut plus s’écouler et le fond risque d’être endommagé par le gel. Les soucoupes doivent être retirées ou retournées en hiver afin d’éviter la formation d’une plaque de glace pouvant entraîner le détachement du fond. Veillez à ce que l’eau ne s’accumule pas, même dans les bacs vides. De préférence, entreposez les pots et bacs vides à l’intérieur : sinon, recouvrez-les.

Conseils d’entretien

Veillez toujours à ce que les plantes soient bien drainées, la solution la plus simple étant la poche EasyDrain d’EMSA. Les pots peuvent être nettoyés avec de l’eau et une brosse souple. N’utilisez pas de produits nettoyants agressifs chimiques ou mécaniques, à savoir, pas d’agent blanchissant, ni de nettoyeur haute pression ou de brosses dures pouvant modifier ou détruire la surface/patine. Sauf indication contraire, tous les pots sont munis d’un écoulement d’eau. Lors d’une utilisation à l’intérieur, veillez à protéger la surface par des inserts ou soucoupes étanches afin d’éviter tout dégât éventuel par l’eau d’arrosage. Des patins courants en feutre protègent les surfaces fragiles des rayures

FONTAINES (fountainslite)

Conception

Posez la fontaine sur une surface plane afin de garantir un flux régulier de l’eau. Une base adaptée en gravier, en plaques de pierre ou d’autres matériaux durs est idéale pour donner la stabilité nécessaire à la fontaine. Une pompe de fontaine ne peut être mise en service qu’avec une alimentation électrique de 230 Volts reliée à la terre (courant alternatif). Des pompes adaptées à une utilisation en extérieur sont fournies d’office avec le produit et peuvent également être commandées comme pièce détachée.

Conseils d’entretien

Un remplissage à des intervalles réguliers est nécessaire pour maintenir l’eau au niveau correct et pour assurer que la pompe reste complètement immergée. Si le niveau d’eau est trop bas, il y a risque d’endommagement de la pompe. La fréquence de remplissage d’une fontaine dépend du courant de l’eau et des conditions météorologiques durant son fonctionnement.

Comme les fontaines sont avant tout conçues pour une installation à l’extérieur et, comme les éclaboussures d’eau dues à la forme et à la finition ne peuvent jamais être totalement exclues, nous conseillons, pour une installation à l’intérieur, de poser la fontaine sur une surface non sensible à l’eau. La fontaine peut être nettoyée avec précaution avec de l’eau, un savon doux et une brosse souple. N’utilisez pas de produits nettoyants agressifs chimiques ou mécaniques, à savoir, pas d’agent blanchissant, ni de nettoyeur haute pression ou de brosses dures pouvant modifier ou détruire la surface/patine. Avant la mise en service, nous conseillons l’utilisation d’un produit anti-algues, disponible dans les jardineries, afin d’empêcher la formation d’algues.

Entretien pendant l’hiver

Les coupes des fontaines, les parties supérieures et autres éléments conducteurs d’eau ne doivent pas passer l’hiver dehors : ils risquent d’éclater lorsque l’eau gèle. Des pièces, comme le socle par ex., posées dans un bassin peuvent également être endommagées par le gel. Il est fortement conseillé de rentrer la fontaine pendant l’hiver et de l’entreposer dans un endroit abrité et sec.

Resistente alle temperature invernali. Resistente al gelo. Inalterabile con il gelo. Cosa significa?

Informazioni da tenere a mente quando si sceglie una fioriera: La pressione esercitata dall’acqua ghiacciata è in grado di rompere tubature (per esempio i condotti d’acqua calda e fredda delle abitazioni), asfalto e pietra. Per garantire la lunga durata del prodotto, oltre alla qualità dei materiali e della lavorazione è fondamentale assicurarne anche il corretto utilizzo e manutenzione.

Manutenzione invernale

Durante il periodo invernale sarebbe bene posizionare piante e vasi in un luogo asciutto e protetto dalle intemperie. Se la pianta è resistente al freddo e viene lasciata in esterno anche in inverno, è bene attenersi alle seguenti indicazioni: I vasi che vengono lasciati all’aperto durante l’inverno devono avere un canale di scolo. Predisponete un sistema di drenaggio efficace, come ad esempio EasyDrain di EMSA. In alternativa, coprite lo scarico con uno strato drenante di argilla espansa e coprite con un panno in tessuto non tessuto per evitare il ristagno di pioggia e neve, che con il freddo potrebbero congelare rischiando così di danneggiare le superfici.

La soluzione migliore sarebbe posizionare i vasi in un luogo coperto, in modo da poter regolare la quantità d’acqua di irrigazione. Se i vasi non sono dotati di piedini integrati, rialzare i vasi con piedini acquistati separatamente. Nel caso in cui il vaso poggi su una superficie piana, infatti, l’azione capillare delle radici può portare alla deformazione permanente del fondo del vaso, che potrebbe quindi essere danneggiato da gelo. I sottovasi in inverno devono essere capovolti o rimossi, in modo che l’acqua in essi contenuti non formi una lastra di ghiaccio che potrebbe poi danneggiare il fondo del vaso. Evitate inoltre il ristagno d’acqua nei vasi vuoti, conservandoli all’interno oppure capovolgendoli e ricoprendoli.

Consigli per la manutenzione

Fare in modo che il drenaggio sia buono: il modo più facile per ottenerlo è utilizzare EasyDrain di EMSA. Se necessario, è possibile pulire le fioriere a forma di trogolo con acqua e una spazzola morbida. Non utilizzare prodotti chimici o meccanici aggressivi per le operazioni di pulizia (per es. candeggina, idropulitrici, spazzole abrasive) perché tali mezzi potrebbero danneggiare la superficie e togliere il rivestimento. Tutti i vasi, salvo ove espressamente indicato, sono dotati di scarico per l’acqua. In caso di utilizzo in ambienti interni, accertarsi di proteggere la superficie su cui è appoggiato il vaso dalla fuoriuscita dell’acqua in eccesso posizionando un inserto impermeabile o un sottovaso. Servirsi di feltrini disponibili in commercio per evitare graffi alle superfici delicate.

FONTANE (fountainslite)

Montaggio

Le fontane devono essere posizionate su una superficie piana e regolare, onde garantire un flusso omogeneo dell’acqua. A tale scopo è bene utilizzare una base realizzata con ghiaia, lastre di pietra oppure con altri materiali adeguati per assicurare la stabilità necessaria. La pompa della fontana deve funzionare esclusivamente con l’alimentatore di 230 V (corrente alternata), provvisto di terra. La confezione standard comprende una pompa adeguata, per usi esterni ed è possibile ordinaria anche come ricambio.

Suggerimenti per la cura

Occorre prevedere regolari rabbocchi affinché il livello dell’acqua possa essere mantenuto ed onde garantire l’immersione completa della pompa. Un livello dell’acqua troppo basso può provocare danni alla pompa. Il numero di rabbocchi della fontana dipende dal flusso dell’acqua e dalle condizioni atmosferiche durante il funzionamento della fontana stessa.

La fontana è stata progettata per essere utilizzata all’esterno – a causa della forma e della lavorazione – non è possibile escludere completamente spruzzi d’acqua. Per questo motivo consigliamo il posizionamento della pompa su una base che non teme l’acqua. All’occorrenza è possibile pulire la fontana con acqua, sapone neutro ed una spazzola morbida. Non utilizzate mai detergenti chimici o meccanici aggressivi, cioè nessun prodotto candeggiante, niente pulitura ad alta pressione oppure spazzole con setole dure, in quanto questi potrebbero modificare e distruggere la superficie/la patina. Prima dell’uso è bene utilizzare un prodotto che inibisca la formazione di alghe, reperibile in qualsiasi negozio specializzato di giardinaggio.

Manutenzione invernale

Durante l’inverno le vasche delle fontane, le parti superiori e tutti gli elementi che trasportano l’acqua non dovrebbero restare all’esterno, in quanto potrebbero rompersi a causa del congelamento dell’acqua. Anche elementi, come per es. lo zoccolino, che si trovano all’interno della vasca potrebbero venire danneggiati. Per il periodo invernale si consiglia pertanto di conservare la fontana in un luogo asciutto, al riparo dalle intemperie.
